The Role of Community Science in DNA-Based Biodiversity Monitoring

Carolina Corrales, Karolina Bacela-Spychalska, Elena Buzan, Torbjørn Ekrem, Sónia Ferreira, William Goodall-Copestake, Elaine van Ommen Kloeke, Peter M. Hollingsworth, Sarah J. Bourlat 

First published: 12 September 2025 | <https://doi.org/10.1111/mec.70100>

Biodiversity Loss and Biomonitoring

- Biodiversity is declining due to human-driver factors
- the Convention on Biological Diversity adopted the Kunming–Montreal Global Biodiversity Framework during COP15, aiming to protect and restore biodiversity by 2030
- Achieving these goals relies on biomonitoring to track changes in biodiversity and assess the efficacy of management interventions and restoration efforts.
- High-tech methods developed to complement traditional biomonitoring: bioacoustics, camera trapping, drones, sensor networks, imaging spectroscopy, satellite data and DNA-based methods.

Hernon, N. (2022)

Community Science

- Active participation of non-professional volunteers (e.g., Indigenous peoples, local communities and general public) in scientific research and biodiversity monitoring by gathering data and conducting experiments under professional guidance.
- Biodiversity monitoring is not an exclusive activity that 'only scientists' are qualified to carry out. It should be a shared responsibility to reverse biodiversity loss.

CS Roles

Contributory:

sample/data collector

vs.

Collaborative:

co-creation approaches provide a two-way interaction between researchers and CS participants, allowing the latter to be involved in the project design and implementation

(Senabre Hidalgo et al. 2021)

CS contributions to biomonitoring have been mainly restricted to visual observations and the collection of samples and their associated data

Contributory Role Examples

1. [Register](#) with our site.
2. Complete the [Safety Training](#) and [Kit Training](#).
3. Complete the [Safety Quiz](#) and [Kit Quiz](#).
4. [Sign up for a bioblitz](#) or contact us to get a kit.

Contributory Role Examples

Svenningsen et al. (2020, 2021)
<https://insektmobilen.snm.ku.dk/>

- Natural History Museum of Denmark
- one month's sampling in 2018
- 365 car net samples: 2114 species identified
- Car nets can sample over 1000 individuals per sampling trip (approx. 10–20 min)

Collaborative Role Examples

GainForest E.V. (2024) non-profit organisation based in Zürich + ETH BioDivX

<https://biodivx.org/>

Andrea Desiderato explaining eDNA to the Indigenous People of Aldeia Inhaã-bé, who chair our Indigenous Data Council and are Indigenous members of our team.

Collaborative Role Examples

- BeeCode Berlin Project: explores the genetic diversity of bees in Berlin's urban areas to promote biodiversity and sustainable beekeeping practices
- Mobile sequencing lab: DNA barcoding workshops for high school students regarding laboratory and computational techniques to identify honeybee subspecies

DNA barcode Kurs 2023, Foto MDC Communication Department

BeeCode workshop: co-organiser Silvia Carvalho and students inspect a gel on Bento Lab

<https://impetus4cs.eu/beecode-berlin/>
<https://ecocodedna.com/>

Collaborative Role Examples

- National Trust, Freshwater Habitats Trust, NatureMetrics in UK
- National Trust volunteers, members of the local angling club, members of local natural history groups
- Co-design project: Sampling locations, river Bure
- 35 water samples over a 9-day period. 69 vertebrate taxa were recorded

Questions to be addressed through co-designed study

How do barriers to fish movement affect fish assemblages?

How important are the headwaters of the Bure for overall fish diversity in the catchment?

Where are mink present?

Are there water voles in the catchment?

Where are eels in the catchment?

(Clarke et al. 2022)

Photo: Tom Sayer

FIGURE 1 Map of sampling locations in Upper Bure catchment, Norfolk as determined by the citizen scientist group. Major barriers to fish movement shown in red and fish species richness per sample site indicated by size of points.

Collaborative Role Examples

- “DNA & life” and “Extreme DNA & life” projects: collaborative partnerships with teachers and high school students
- Ca. 3000 students involved in the projects

FIGURE 3
 Location of DNA laboratories in the DNA & life project. Blue square represents the *Original DNA & life* laboratory at the Natural History Museum of Denmark and red triangles represent *Extreme DNA & life* DNA laboratories at Hjørring Gymnasium and Herning Gymnasium respectively.

FIGURE 4
 Development and distinction between the *Original DNA & life* project and the *Extreme DNA & life* project. The person/group performing or facilitating different phases of the scientific process, at different locations, is emphasized for both projects.

What do these projects have in common?

Logistics

(Group to be engaged, geographic scope and sampling locations, sample type/number of replicates, sampling methods/sampling kits, metadata)

Communication strategy

(Advertisement and Engagement with volunteers: radio, news, social media, email, telephone)

Recruitment of participants

(Partnership with different entities e.g., environmental agencies, NHMs, schools, NGOs, conservation charities, hunting associations, fishing clubs, local/national scientific societies, farmers)

Educational and training material

(Videos, guidelines, workshops)

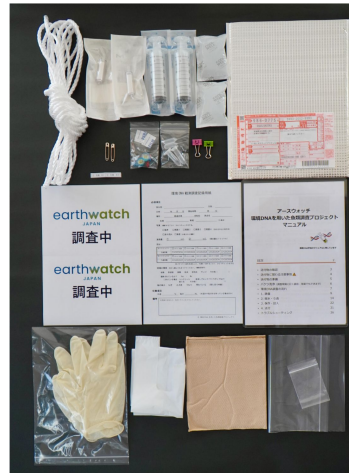

Communication of results and recognition

(Website, workshop)

What do these projects have in common?

Challenges

Get Help!

Partnerships are the key:

- Involve PhD students, postdocs, educators with molecular biology training, hobby experts or experienced para-taxonomists, or design a 'train the trainers' course if necessary
- Consider partnering with eDNA service providers (e.g., NatureMetrics, SpyGen, Wilderlab, and SimplexDNA)
- Take advantage of online resources to present new concepts ahead and ensure the same knowledge level.
- Consider collaborating with teaching and learning programmes or community science labs to develop your activities
- Contact the CS or education department at your institute

Some of these centres also offer in-person training
